Customer Segments & Store Trial Results

Retail Analytics

Roll out the trial initiative — it grew sales by bringing in new customers, not by spending more per visit.

01

Families drive value

Older & Young Families spend the most per customer (~\$32–\$35), the highest of any segment

02

Singles/Couples drive volume

Young Singles/Couples are the single largest customer base, but spend the least per visit (~\$15–\$19).

03

The trial worked

All 3 trial stores saw statistically significant sales gains — up to +62% — driven mainly by more shoppers, not bigger baskets.

PART 01 – CUSTOMER ANALYTICS

Average Spend per Customer by Segment (\$)

WHAT THIS MEANS

Families = value. Older and Young Families spend \$32–\$35 per customer — the top tier across all segments. They are worth retaining and rewarding.

Singles/Couples = volume. Young Singles/Couples (Mainstream) are the single biggest customer group (7,917 shoppers) but spend the least per person — an opportunity to grow basket size, not just footfall.

PART 2 – STORE TRIAL RESULTS

All three trial stores significantly outperformed their matched controls

SIGNIFICANCE (95% CONF.)

Store 77

Control: 233

Mar & Apr

Store 86

Control: 155

Mar only

Store 88

Control: 203

All 3 months

Store 88's control match was weaker ($r=0.51$ vs $0.9+$ for others) — treat its result with slightly less confidence.

PART 2 – STORE TRIAL RESULTS

The growth came from more customers — not bigger baskets

READING THE CHART

Customer counts rose significantly; spend per customer barely moved. New footfall, not bigger baskets, drove the result.

Store 88: A smaller, secondary lift in spend per customer too — the most balanced result of the three.

Takeaway: The trial's core strength is customer acquisition. Any rollout plan should lean into whatever drove people through the door.

RECOMMENDATIONS & NEXT STEPS

Three moves for the next strategic

1

Roll out the trial change

Extend the initiative tested in stores 77, 86 & 88 to a wider set of stores — it reliably drew in more customers.

2

Grow basket size for Singles/Couples

Design offers (multi-buy, larger packs) aimed at the Young Singles/Couples segment — your biggest audience, but lowest spend per visit.

3

Protect the Families segment

Older & Young Families already spend the most per visit — loyalty and retention offers here protect high existing value.
